## Who are RDT?

RDT is a focused and successful agile software company. It has been working in the UK insurance market for over 20 year and in this time has been delivering highly innovative software and consulting solutions. RDT prides itself on being a disruptive force in the insurance market and has been at the forefront of many pivotal technology innovations. This is still true today, as we continue to build industry changing products in our singular quest to ReDefine Tomorrow. To find out more about us and what we do click here [www.rdt.co.uk](http://www.rdt.co.uk).

As part of RDT's ongoing commitment to hiring the best people for every vacancy we have, we recognise that sometimes we need to be flexible and consider the particular needs of each applicant. If you think your skills and experience might match this role but need to work in a particular way; different hours or more flexibly – don't not apply, give us a chance to see if we can match what you need before you count us out of your job search.

## The Project

RDT's modernisation strategy incorporates an increased focus on providing hosted services. To support this strategy we are looking for large changes to our delivery platform over the next six to 12 months' to enable efficient delivery of software to our hosted environments and beyond.

The main objective is to implement RDT's target continuous delivery model for Azure infrastructure as code flowing into production environments. This project is critical into the aims of achieving self-service environments on demand for RDT's development teams whilst also providing a repeatable production ready managed service on boarding for new customers as the company continues its expansion plans.

This project requires someone with a production first mentality and a true focus on efficiency and speed without compromising quality.

We will be demonstrating true end-to-end continuous delivery for a new managed service offering and therefore are looking for additional resource for the next 6 months to help push this project over the line.

## Skills Required

- Highly Proficient with Azure DevOps (Essential)
- In depth knowledge of Azure PaaS and IaaS (Essential)
- Highly Proficient in the use of Terraform with Azure (Essential)
